1947-'48

It is our belief that florists have never faced a more encouraging coming season. Not only are the prospects for business good, but labor and material are becoming more abundant. This trend must of course be reflected some in flower prices; but this easing condition will create a far more satisfactory situation than has prevailed in the past. And—we were never better supplied with seed of our carefully selected greenhouse-grown specialties; particularly Forcing Snapdragons, Stocks, Begonias, Cinerarias, Calceolarias and Primulas.

## BALL BETTER WOOD PLANT BANDS

*Ready for Immediate Delivery*

A better buy because—

1. Aeration and Drainage better—Our own trials, and reports of experienced growers everywhere, favor wood over waterproof paper for all-important drainage and aeration.

2. Long Life—Ball Bands are preservative-treated. Our treated Bands last many months in moist soil. Only select grades of veneer used.

3. Ready to use—Bands reach you double stapled; simply open and plant.

4. Flats! Short of flats these days? Ball Better Bands reach you packed in preservative-treated greenhouse flats (2 flats per unit of 2000 bands). These flats would cost you plenty delivered and assembled. Figure this when comparing prices.

# "All the Best"

**FORCING SNAPS** unquestionably head the list of seed grown cut flower crops, and, as growers ourselves, we are in a position to fully realize the importance of this in developing strains of real value to florists. Nearly all Snapdragon seed we sell, except originator-grown hybrid varieties, is produced in our own greenhouses, and supplies this year are unusually good and complete. Remember though—good culture is as important as good seed. Our "Grower Talks" (monthly, 2 yrs. \$1.00) provides timely notes of help to florists.

## PLEASE NOTE

1/2 tr. pkts. of any variety priced at \$1.00 are supplied at **60c**; 1/2 pkts. of \$1.50 varieties, **\$1.00**. No 1/2 pkts. on \$2.00 or \$3.00 varieties **EXCEPT WHERE NOTED**. While we obviously have no control over the amount of seed in originator's packets, all of our own contain at least 2,000 seeds.

Snap "Margaret" in our greenhouses. A good producer and a clean grower.

## BALL 10 BEST

(Self-Pollinated Varieties)

Although no group of "best" varieties is complete without including the hybrids, uncertain supplies have obliged us to omit them from this select list. The following, therefore, includes what we consider the ten best of the self pollinated varieties.

- \* **Ball Lavender.** Long stemmed and strong growing with heavy spikes of pleasing orchid lavender. A ready seller on most markets. Tr. pkt., **\$1.50**.
- \* **Cheviot Maid No. 33 (Yoder).** This clean growing, beautiful light rose pink Cheviot Maid selection has proven immensely popular with all who have grown it. One of the best commercial varieties. Tr. pkt., **\$1.50**.
- \* **Delworth's Supreme.** One of the finest Cheviot Maid selections we have grown. True early flowering with long, strong stems and fine spikes of deep rose pink. Tr. pkt., **\$1.50**.
- \* **Ethel.** The most satisfactory fairly deep yellow that we know of. Perfectly uniform in habit without grassy side growth and with medium sized closely set spikes. Tr. pkt., **\$1.50**.
- \* **Lady Dorothy.** This fine Snap is outstanding for its rich reddish bronze color and its true winter

flowering habit. The best early bronze to date. Tr. pkt., **\$3.00**.

- \* **Margaret.** Because of its fine production record, stiff stems and grass-free growth, this creamy white Snap has become very popular wherever grown. Highly recommended where purity of whiteness is not important. Tr. pkt., **\$2.00**.
- \* **New Cincinnati.** A medium rose pink with long shatter-proof spikes and extra long, stiff stems. We feel that this variety is one of the best for late winter and should be more widely grown. Tr. pkt., **\$1.00**.
- \* **Peggy Schumann.** Extra fine, creamy rose pink with heavy stiff stems and well formed spikes. This truly fine variety is steadily increasing in popularity. Tr. pkt., **\$2.00**.
- \* **St. Louis Pink.** If you're looking for that popular Maryland Pink or Mary Ellen color for late winter flowering, this is it. Tr. pkt., **\$1.50**.
- \* **White Wonder Improved (Ball).** Our own uniformly long stemmed, even growing strain of this pure white variety. Tr. pkt., **\$1.50**.
- \* **Ball Forcing Mixture.** Carefully balanced mixture of the best varieties. Tr. pkt., **\$1.00**.

# Florists' Snaps

## HYBRID VARIETIES

Hybrid Snaps are the result of crossing pure-line strains of two distinct varieties, and possess, among other good points, the inherent quality known as "hybrid vigor" not found in any self-pollinated variety. Because of their hybrid nature, it is very important that no seed be saved from the flowering crop as it will result only in a disappointing mixture. Since only the originators of these varieties have knowledge of the parents used in producing them, seed from other sources is almost sure to prove unsatisfactory; therefore we offer only originator's packets of hybrid varieties. Because the production of hybrid seed calls for much hand labor in cross-pollinating, the supply is often short of the demand. We offer the varieties listed at right.

- \***Better Times.** The brightest cerise-rose in forcing Snaps. Fairly early with medium length stems and compact spikes. Tr. pkt., \$2.00.
- \***Christmas Cheer.** Extra early and productive bright rose pink. Very popular. 1/2 Tr. pkt., \$1.75; Tr. pkt., \$3.00.
- \***Dorcas Jane.** Introduced last season, sales of this variety have exceeded all expectations. A second early with good stems and long spikes of soft silvery rose. 1/2 Tr. pkt., \$1.50; Tr. pkt., \$2.50.
- \***Mary Ellen.** Almost identical to Maryland Pink in its soft rose pink coloring, but is somewhat later and has longer stems and flower spikes. Tr. pkt., \$2.00.
- \***Maryland Pink.** Soft creamy pink; early flowering with medium length stems. 1/2 Tr. pkt., \$1.75; Tr. pkt., \$3.00.

# Ball Stocks mean Better Profits

Important points to keep in mind in growing a profitable crop of Stocks are that clean or sterilized soil is necessary to prevent root rot as well as timely supporting to avoid worthless crooked stems. And growers are writing to tell us of the saving in time they realize by sowing seed direct. Ask for our free leaflet giving details.

The increasing yearly demand for this seed is further proof of the high regard most growers have for these fine scientifically-bred strains of Ball Stocks, and constant research is being carried on here in our West Chicago greenhouses to maintain our top position in this important part of "Flower Seeds for Florists".

## OUR THREE BEST

These three varieties constitute over half of our demand for Non-Branching Stocks.

**\*No. 16 Ball White Improved-Medium Tall.**

Our earliest pure white, with extra large florets and well-formed, compact spikes. Not recommended for outside planting, but sufficiently long-stemmed for greenhouse culture.

**\*No. 1 Lilac Lavender.** Second only in popularity to Ball White. Our own excellent large flowered strain that is well liked by all markets.

**\*No. 22 Ball Supreme.** Extra long stiff stems and fine heavy spikes of rich silvery rose have made this the outstanding variety of its color class.

## Miscellaneous Varieties

**\*No. 20 Ball Apricot.** Large flowered creamy buff; a few days later than other varieties.

**No. 24 Deep Apricot.** Slightly darker and somewhat longer stemmed than the above variety.

**No. 17 Gold Standard.** Creamy ivory yellow. An attractive novelty color.

**No. 10 Mixture.** Our own formula mixture. Contains mostly good market varieties with a limited amount of novelty colors.

## Hyacinth Flowered Varieties

**\*No. 5 Ball Dwarf White.** The dwarf non-branching plants carry one compact spike of pure glistening white.

**No. 25 Ball Dwarf Rose.** A smoky coral rose of limited demand; somewhat taller than the above. Early flowering.

**No. 26 Ball Dwarf Ruby.** Bright crimson red; medium dwarf.

**No. 27 Ball Dwarf Mixture** of above three.

**Prices on All the Above Non-Branching Varieties:** 1/2 Tr. pkt., 60c; Tr. pkt. (about 1,200 seeds), \$1.00; 1/4 oz., \$2.50; 1 oz., \$9.00.

# BRANCHING STOCKS

Retail growers should include some of this class in their planting. All, with the exception of the Dwarf Ten Week, are handled the same. Plant 8 x 8 in. and top when about 8 in. tall for plenty of good flowers with medium length stems. The Dwarf Ten Week type is largely used for pot plants.

# Winter Sweet Peas

(350 seeds per oz.)

When well grown, most growers are finding Winter Peas quite profitable under present day conditions. Most any wholesale market will welcome a moderate amount of them and for retail growers they are almost indispensable. To be worthwhile though, they must be grown in sterilized soil and sown early enough to get the vines sufficiently hardened to hold buds for winter flowering. With us this is early July—later further south. Our monthly "Grower Talks" (2 yrs. \$1.00) gives complete cultural details.

# Spring Flowering Peas

## New Cuthbertson Strain

(350 seeds per oz.)

For greenhouse sowing between October and February, we find this new strain superior to the Early or Winter class. While their stronger growth makes them a week or 10 days later flowering, they are generally longer stemmed and last longer into the spring than the weaker growing Earlies. They are also increasingly used for outdoor planting. **Seed of all the following new Cuthbertson varieties will be ready September 1.**

- \***Janet** (Formerly Black Seeded White). Large frilled flowers of pure white are carried on long heavy stems.
- \***Carol** (New). Clear pink on white ground.
- Evelyn** (Formerly Salmon Cream Pink). Extra long stemmed, soft salmon pink.
- \***Lois** (Formerly Rose Pink). Similar in color to "Ball Rose Queen" in the Winter class.

- Billy** (Formerly Light Carmine). Bright cerise rose on salmon.
- \***Coline** (New). Vivid, intense scarlet.
- Hazel** (Formerly Light Blue). "Princess Blue" shade.
- \***Tommy** (Formerly Blue). A clear mid-blue about the color of "Mrs. Hoover" in the Winter class.
- Danny** (Formerly Navy Blue). Brilliant deep marine blue.
- \***Frank G.** (Formerly Lavender). Fine soft rosy lavender. Named for the originator of the new Cuthbertson strain.
- \***Jessie** (Formerly Mauve). Closely resembles Winter Flowering "Triumph" in its rich coloring.

**PRICES on Above Spring Flowering Cuthbertson Varieties:**

# Plants with Ball's Seed

## BEGONIAS

### FIBROUS ROOTED

For your convenience we have grouped all the Fibrous Rooted Begonias into 3 classes; Dwarf, Intermediate and Tall, rather than the old and confusing classification of Semperflorens and Gracilis. We have ample supplies of our own perfectly-cleaned, greenhouse - grown seed of nearly all varieties listed below. Seed may be sown at any time, but a summer sowing will produce choice pot plants for Christmas and early winter.

Fibrous-Rooted Begonias, by the nature of their growth, divide themselves readily into the three types pictured here; dwarf, intermediate and tall.

### DWARF CLASS

\***Ball Red.** Fairly dwarf in growth and of uniform, perfectly rounded habit. The plants are literally covered with medium large flowers of bright scarlet red with no rose shading. Because this variety, as well as its parent King of the Reds, is somewhat less resistant to a form of rot than most others, care must be used to control soil moisture and humidity especially when plants are small. Watering should be done only in the mornings of bright days. Tr. pkt., \$1.00;  $\frac{1}{4}$  oz., \$2.75;  $\frac{1}{2}$  oz., \$5.00.

\***Ball Deep Rose.** Identical in habit to Adeline from which it was selected. Under winter and spring conditions the color is a deep rich rosy red which gradually fades to a bright luminous pink with the coming of warmer weather. Tr. pkt., \$1.00;  $\frac{1}{4}$  oz., \$2.75;  $\frac{1}{2}$  oz., \$5.00.

\***Adeline.** Extra free flowering bright pink; dwarf and compact. Tr. pkt., \$1.00;  $\frac{1}{4}$  oz., \$2.50;  $\frac{1}{2}$  oz., \$4.50.

\***Ball White.** We find this the finest white for pot plant use. Tr. pkt., \$1.00;  $\frac{1}{4}$  oz., \$2.50;  $\frac{1}{2}$  oz., \$4.50.

\***Luminosa Compacta.** Extra dwarf, free flowering scarlet red. Tr. pkt., \$1.00;  $\frac{1}{4}$  oz., \$3.00;  $\frac{1}{2}$  oz., \$5.50.

**Dwarf Varieties Mixed.** Our own formula mixture of dwarf varieties. Fine for combinations. Tr. pkt., \$1.00;  $\frac{1}{4}$  oz., \$2.50;  $\frac{1}{2}$  oz., \$4.50.

### INTERMEDIATE CLASS

\***Carmen.** The original bronze-leaved Begonia; bright rose-pink flowers. Tr. pkt., \$1.00;  $\frac{1}{4}$  oz., \$2.25;  $\frac{1}{2}$  oz., \$4.00.

\***Fire Sea** (Blaze of Fire). Large fiery red with green foliage. Tr. pkt., \$1.00;  $\frac{1}{4}$  oz., \$2.25;  $\frac{1}{2}$  oz., \$4.00.

\***Indian Maid.** Foliage a deep lustrous bronze with contrasting scarlet flowers. Tr. pkt., \$1.00;  $\frac{1}{4}$  oz., \$2.50;  $\frac{1}{2}$  oz., \$4.50.

\***King of the Reds.** Free flowering rose red; vigorous but compact in growth. See "Ball Red" description for special cultural notes on this variety. Tr. pkt., \$1.00;  $\frac{1}{4}$  oz., \$2.50;  $\frac{1}{2}$  oz., \$4.50.

\***Scandinavia Red.** Identical to the above except for its bright carmine scarlet flowers. Tr. pkt., \$1.00;  $\frac{1}{4}$  oz., \$2.75;  $\frac{1}{2}$  oz., \$5.00.

**Scandinavia White.** A white Scandinavia selection. Tr. pkt., \$1.00;  $\frac{1}{4}$  oz., \$2.75;  $\frac{1}{2}$  oz., \$5.00.

# Primulas

## PRIMULA MALACOIDES

(12,000 seeds per  $\frac{1}{32}$  oz.)

This popular pot plant Primula may be sown from June on for Valentine's Day and later. Sowings made in August and early September make nice 3 in. plants for spring combinations. Malacoides Primulas are susceptible to a form of crown rot that is best controlled by keeping plants uniformly moist and in a temperature of not over 50°. Sow seed only in sterile unfertilized material as soils with a nitrate level of over 20 ppm. may result in poor germination.

# Profitable Delphinium

(10,000 seeds per oz.)

Delphinium will germinate poorly in a high temperature. We find the best plan for producing strong plants to sell or plant out in spring is to sow around Sept. 1 in finely prepared soil in a cold frame. Be sure it is well watered and sow thinly to avoid the necessity of transplanting.

For forcing, sow the seed not later than Aug. 1 in flats set in the coolest spot available and later transplant the seedlings into frames. After a short rest, or late Nov. they should be taken up and planted in a cold house spacing 6 x 8 in. About Feb. 1, start them into growth in a minimum temperature of 40-45°, later increasing to 50° nights. This schedule should get them into full crop by Mother's Day. The finest of all hybrid Delphinium are the Giant Pacific Hybrids.

# Annual Larkspur

(8,000 seeds per oz.)

(Pictured in color on back cover)

For growers who must plant Larkspur early we are offering this year for the first time, seed from a specially grown crop of our Six Best Varieties which should be ready by August 1. New crop seed from our main harvest will be ready late August and early September, in time for most growers' needs.

Larkspur is a very popular cut flower crop for both under glass and in the open. If a sowing is made outdoors by growers in the near south 6 or 7 weeks before the ground freezes, plants well enough established to winter over in all except the most severe seasons can be produced. In our locality sowing should be done late enough to avoid germination before the ground freezes. With good drainage and some coarse covering such a sowing will germinate promptly in early spring and get into flower 2 or 3 weeks before the spring sown crop.

For indoor growing, Larkspur is a nice crop to follow either late or early Mums. Well started 3 inch pot plants should be ready, and are produced by a September sowing in pots set in a cold frame. We prefer raised beds for Larkspur, but if ground beds are well drained and care is used in watering, very good results can be had with them. The base-branching varieties which include the Six Best listed below are largely used today, although the new Super Majestics are gaining wide favor.

## SIX BEST CUTTING VARIETIES

Our own market experience as well as seed demands, indicate that these represent the most satisfactory commercial varieties. All are base branching.

## BASE BRANCHING OR IMPERIAL VARIETIES

- \***Coral King.** Pleasing, soft coral rose.

- \***Exquisite Pink Imp.** Fine soft pink.
- Gloria Imp.** Extra fine; deep rose.
- \***Lilac King.** Rich, deep bluish-lavender.
- \***Lilac Queen.** Deep orchid; lighter and rosier than Lilac King.
- Los Angeles Imp.** Bright salmon rose.
- Miss California.** Pleasing, salmon pink.
- Pink King.** Attractive, soft light pink.
- \***White Cockade.** Fine, fully double pure white flowers.
- White Spire.** Clear white.
- \***Formula Mixture** of above varieties.

**PRICES on All Above Varieties Including Mixture:** Tr. pkt., 25c; 1/4 oz., 40c; 1/2 oz., 65c; 1 oz., \$1.10; 4 oz., \$3.60; 1 lb., \$11.00.

## GIANT HYACINTH FLOWERED

- Produces one long non-branching spike.
- |                  |                 |              |
|------------------|-----------------|--------------|
| <b>Dark Blue</b> | <b>Lavender</b> | <b>Pink</b>  |
| <b>Purple</b>    | <b>White</b>    | <b>Mixed</b> |

**PRICES on All Above Varieties Including Mixture:** Tr. pkt., 35c; 1/4 oz., 50c; 1 oz., \$1.60; 4 oz., \$5.20; 1 lb., \$16.00.

## SUPER MAJESTICS

Extra vigorous growth with long stems and long spikes of fully double flowers are the important points about this new Larkspur strain. For outdoor growing, where older varieties have been rather short-stemmed, the 20% additional length of this new class is a distinct advantage. Equally valuable for greenhouse culture (see photo below).

- \***Rose Pink.** Creamy rose-pink.
- \***Lavender.** Deep, rosy lavender.
- \***White.** Large, pure white.
- \***Mixture** of above colors.

**PRICES on All Above Super Majestic Varieties and Mixture:** Tr. pkt., 35c; 1/4 oz., 50c; 1 oz., \$1.50; 4 oz., \$5.00; 1 lb., \$15.00.

Super Majestics are "tops" for vigorous growth and fully double flowers.

## **SUPER MAJESTICS AND GIANT IMPERIALS**

should definitely head the list of Larkspur classes. The new Super Majestics in Rose Pink, Lavender and White are not only the longest stemmed, but more double flowering as well. The ease with which they are grown both in and outdoors, combined with the improved classes, explains the increasing demand for them. Also, their bulk and weight will always leave them a locally grown crop.
